General Multilayer Ceramic Capacitors

MLCC is an electronic part that temporarily stores an electrical charge and the most prevalent type of capacitor today. New technologies have enabled the MLCC manufacturers to follow the trend dictated by smaller and smaller electronic devices such as Cellular telephones, Computers, DSC, DVC

General Features

- Miniature Size
- Wide Capacitance and Voltage Range
- Tape & Reel for Surface Mount Assembly
- Low ESR

Applications

- General Electronic Circuit

Part Numbering

CL 10 B 104 K B 8 N N N C

U □	-	U2J	U2J	U2J

J : □120PPM/ □ , H : □60PPM/ □ , G : □30PPM/ □

□ NOMINAL CAPACITANCE

Nominal capacitance is identified by 3 digits.

The first and second digits identify the first and second significant figures of the capacitance.

The third digit identifies the multiplier. 'R' identifies a decimal point.

□ Example

Code	Nominal Capacitance
1R5	1.5pF
103	10,000pF, 10nF, 0.01 □ F
104	100,000pF, 100nF, 0.1 □ F

□ CAPACITANCE TOLERANCE

Code	Tolerance	Nominal Capacitance
A	±0.05pF	Less than 10pF (Including 10pF)
B	±0.1pF	
C	±0.25pF	
D	±0.5pF	
F	±1pF	
F	±1%	More than 10pF
G	±2%	
J	±5%	
K	±10%	
M	±20%	
Z	+80, -20%	

□ RATED VOLTAGE

Code	Rated Voltage	Code	Rated Voltage
R	4.0V	D	200V
Q	6.3V	E	250V
P	10V	G	500V
O	16V	H	630V
A	25V	I	1,000V
L	35V	J	2,000V
B	50V	K	3,000V
C	100V		

□ THICKNESS OPTION

Size	Code	Thickness(T)	Size	Code	Thickness(T)
0201(0603)	3	0.30 ±0.03	1812(4532)	F	1.25 ±0.20
0402(1005)	5	0.50 ±0.05		H	1.6 ±0.20
0603(1608)	8	0.80 ±0.10		I	2.0 ±0.20
0805(2012)	A	0.65 ±0.10		J	2.5 ±0.20
	C	0.85 ±0.10		L	3.2 ±0.30
	F	1.25 ±0.10	2220(5750)	F	1.25 ±0.20
1206(3216)	Q	1.25 ±0.15		H	1.6 ±0.20
	C	0.85 ±0.15		I	2.0 ±0.20
	F	1.25 ±0.15		J	2.5 ±0.20
1210(3225)	H	1.6 ±0.20		L	3.2 ±0.30
	F	1.25 ±0.20

APPLICATION MANUAL

ELECTRICAL CHARACTERISTICS

CAPACITANCE - TEMPERATURE CHARACTERISTICS

CAPACITANCE - DC VOLTAGE CHARACTERISTICS

CAPACITANCE CHANGE - AGING

IMPEDANCE - FREQUENCY CHARACTERISTICS

□ STORAGE CONDITION

□ Storage Environment

The electrical characteristics of MLCCs were degraded by the environment of high temperature or humidity. Therefore, the MLCCs shall be stored in the ambient temperature and the relative humidity of less than 40 °C and 70%, respectively.

Guaranteed storage period is within 6 months from the outgoing date of delivery.

□ Corrosive Gases

Since the solderability of the end termination in MLCC was degraded by a chemical atmosphere such as chlorine, acid or sulfide gases, MLCCs must be avoid from these gases.

□ Temperature Fluctuations

Since dew condensation may occur by the differences in temperature when the MLCCs are taken out of storage, it is important to maintain the temperature-controlled environment.

□ DESIGN OF LAND PATTERN

When designing printed circuit boards, the shape and size of the lands must allow for the proper amount of solder on the capacitor.

The amount of solder at the end terminations has a direct effect on the crack.

The crack in MLCC will be easily occurred by the tensile stress which was due to too much amount of solder. In contrast, if too little solder is applied, the termination strength will be insufficiently.

Use the following illustrations as guidelines for proper land design.

Recommendation of Land Shape and Size.

□ ADHESIVES

When flow soldering the MLCCs, apply the adhesive in accordance with the following conditions.

□ Requirements for Adhesives

They must have enough adhesion, so that, the chips will not fall off or move during the handling of the circuit board.

They must maintain their adhesive strength when exposed to soldering temperature.

They should not spread or run when applied to the circuit board.

They should harden quickly. They should not corrode the circuit board or chip material.

They should be a good insulator. They should be non-toxic, and not produce harmful gases, nor be harmful when touched.

□ Application Method

It is important to use the proper amount of adhesive. Too little and much adhesive will cause poor adhesion and overflow into the land, respectively.

unit : mm

Type	21	31
a	0.2 min	0.2 min
b	70~100 μm	70~100 μm
c	> 0	> 0

□ Adhesive hardening Characteristics

To prevent oxidation of the terminations, the adhesive must harden at 160 °C or less, within 2 minutes or less.

□ MOUNTING

□ Mounting Head Pressure

Excessive pressure will cause crack to MLCCs. The pressure of nozzle will be 300g maximum during mounting.

□ Bending Stress

When double-sided circuit boards are used, MLCCs first are mounted and soldered onto one side of the board. When the MLCCs are mounted onto the other side, it is important to support the board as shown in the illustration. If the circuit board is not supported, the crack occur to the ready-installed MLCCs by the bending stress.

□ Manual Soldering

Manual soldering can pose a great risk of creating thermal cracks in chip capacitors.

The hot soldering iron tip comes into direct contact with the end terminations, and operator's carelessness may cause the tip of the soldering iron to come into direct contact with the ceramic body of the capacitor.

Therefore the soldering iron must be handled carefully, and close attention must be paid to the selection of the soldering iron tip and to temperature control of the tip.

□ Amount of Solder

□ Cooling

Natural cooling using air is recommended. If the chips are dipped into solvent for cleaning, the temperature difference (ΔT) must be less than 100 °C

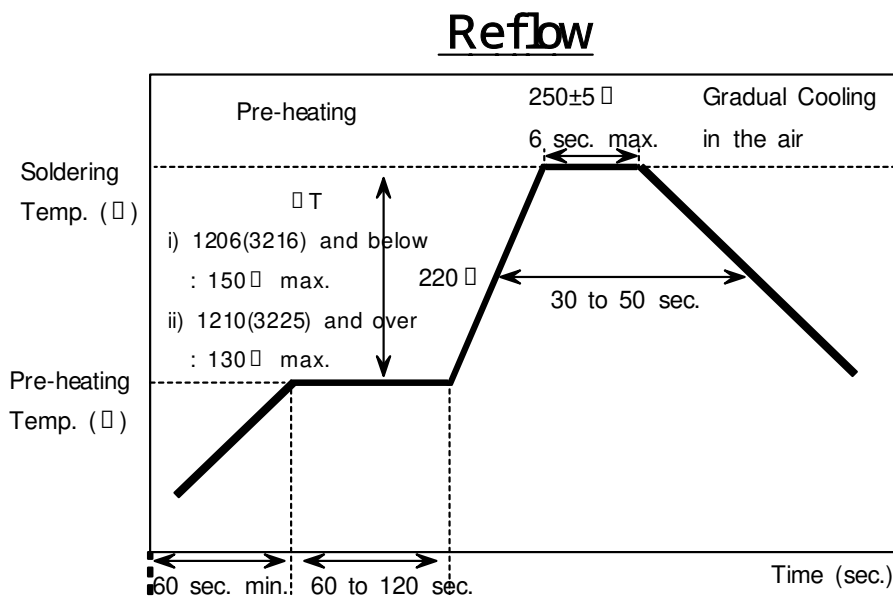

□ Cleaning

If rosin flux is used, cleaning usually is unnecessary. When strongly activated flux is used, chlorine in the flux may dissolve into some types of cleaning fluids, thereby affecting the chip capacitors. This means that the cleaning fluid must be carefully selected, and should always be new.

□ Notes for Separating Multiple, Shared PC Boards.

A multi-PC board is separated into many individual circuit boards after soldering has been completed. If the board is bent or distorted at the time of separation, cracks may occur in the chip capacitors. Carefully choose a separation method that minimizes the bending of the circuit board.

□ Recommended Soldering Profile

Flow

Soldering Iron

Variation of Temp.	Soldering Temp (°C)	Pre-heating Time (Sec)	Soldering Time(Sec)	Cooling Time(Sec)
ΔT ≤ 130	300 ± 10 °C max	≤ 60	≤ 4	-

Condition of Iron facilities		
Wattage	Tip Diameter	Soldering Time
20W Max	3mm Max	4 Sec Max

*** Caution - Iron Tip Should Not Contact With Ceramic Body Directly.**
